Abstract

Each and every pet requires good health along with special care and attention. These days people bring home a pet but they do not have the proper proficiency of parenting. Through our project “Furway: Hatch for the Hound” we will be providing accurate information regarding parenting of dogs.

1. INTRODUCTION

1.1 PROBLEM DEFINITION

Vaccination is a great way to give your dog immunity to some of the worst infectious diseases, and make sure they are as safe as they can be.

Although it is important that your dog has a vaccination appointment every year, not all the vaccines will be given at every appointment. This is because different vaccines last for different amounts of time – your vet will be able to tell you about the schedule for your dog. Your dog will need at least one vaccine every year, however, and your dog should have a thorough health check at least once a year as part of their general healthcare. This helps your vet check that no developing health problems can be detected.

Vaccination of dogs is the practice of animal vaccination applied to dogs. Programs in this field have contributed both to the health of dogs and to the public health. In countries where routine rabies vaccination of dogs is practiced, for example, rabies in humans is reduced to a very rare event.

1.2 BACKGROUND ABOUT THE PROJECT IDEA

Our dogs are in the midst of an epidemic. It's not an epidemic of viral disease, but of chronic ill health. They're besieged with itchy, pus-laden, scabby skin; vomit and diarrhoea are the norm. One in every hundred dogs suffers from epilepsy, and an even higher number lives with painful arthritis. Allergies are also reaching epidemic proportions: dogs are becoming allergic to life.

We also seem to have a tremendous number of dogs with behavioral problems, largely due to over-vaccination and processed pet food. Vaccines are known to cause inflammation of the brain, as well as lesions throughout the brain and central nervous system.

1.3 OBJECTIVE OF PROPOSED SYSTEM

The main objective of our Project is to provide a platform for the users where they can find accurate and important information regarding dogs. The aim of this project is to provide a platform for web-based adoption, so that the people can be more aware of dogs waiting to be adopted. They can also give their dogs. The platform also allows the user to donate the desired amount for the welfare of the dogs.

1.4 NEED AND SIGNIFICANCE

Because of the controversy surrounding the danger of vaccinations, some dog owners have decided to skip vaccinations altogether. Having seen many of the diseases that we are able to vaccinate against, I can tell you that this is a poor decision and one that your dog may pay for for the rest of her life, even it is a short and painful one.

Although I am sure you need to vaccinate your puppies, are annual vaccinations for your adult dog even necessary?

Research has proven that they are not, and since all vaccinations have potential side effects (like allergic reactions and immune-mediated hemolytic anemia), you need to ask yourself if your canine companion is in more danger from the vaccine or the disease.

1.5 TECHNICAL SPECIFICATION

1.5.1 TECHNOLOGIES USED

- HTML (HYPERTEXT MARKUP LANGUAGE)
- CSS (CASCADING STYLE SHEETS)
- JAVASCRIPT
- PHP
- GOOGLE CHROME
- VS CODE

2. LITERATURE REVIEW

AS

- 1) <https://www.vets4pets.com/pet-health-advice/dog-advice/vaccinating-your-dog/>
- 2) <https://www.petmd.com/dog/infographic/basic-vaccine-schedule-dogs>

don't have the donation and adoption feature which our website has. And also we've provided more awareness than these two websites..

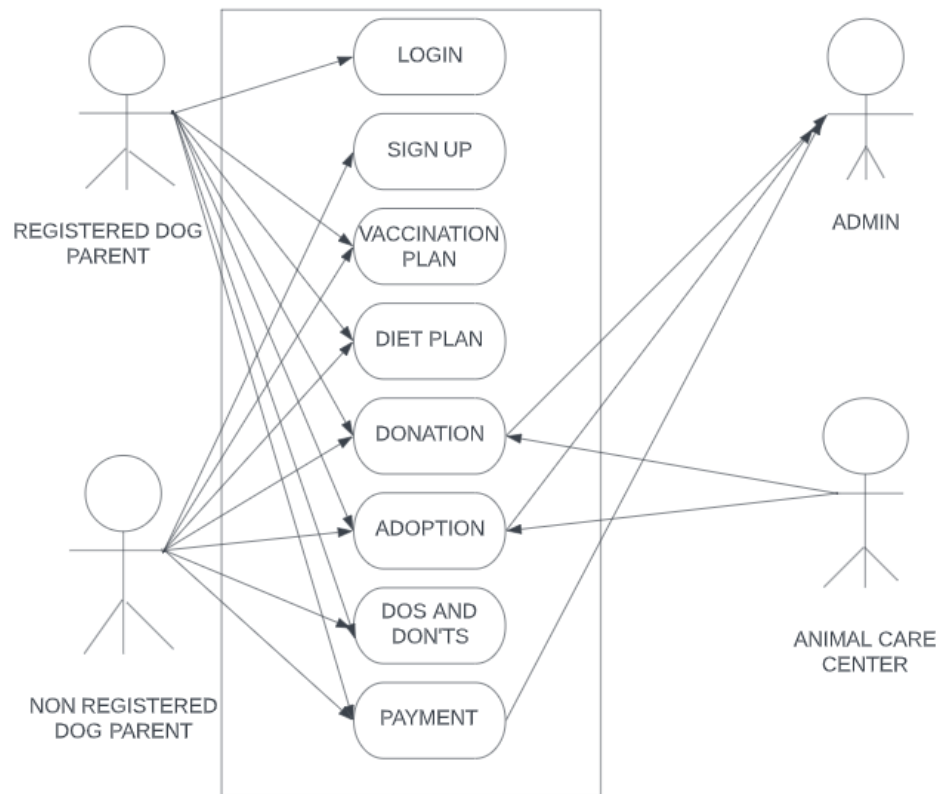

3.PROPOSED SYSTEM

Our platform provides guidelines to the user regarding the health care of pets, how the pets need to be nurtured, about the dos and don'ts of the dogs.

- 1.We will provide a table of vaccination for dogs with the approximate price of the vaccine. This section will give the entire information regarding vaccination of dogs that includes which vaccine is to be given at what age.
- 2.We will be providing a complete diet chart for dogs by taking the input of the type of breed and their age. So that the people know exactly what they have to give their dogs to eat in order to keep them fit and healthy.
- 3.We will be giving the information regarding the do's and don'ts for dogs.
4. For adoption, the user can choose the pets and view their details, and if they wish they can continue with the process of adoption.
- 5.This application will provide the user an option of donating any amount of money for the welfare of dogs. This donation can be done using digital mode of transactions.

DOG SHOT SCHEDULE

DOG'S AGE	RECOMMENDED VACCINATIONS	OPTIONAL
6 — 8 weeks	Distemper, parvovirus	Bordetella
10 — 12 weeks	DHPP (vaccines for distemper, adenovirus [hepatitis], parainfluenza, and parvovirus)	Influenza, Leptospirosis, Bordetella, Lyme disease per lifestyle as recommended by veterinarian
16 — 18 weeks	DHPP, rabies	Influenza, Lyme disease, Leptospirosis, Bordetella per lifestyle
12 — 18 months	DHPP, rabies	Coronavirus, Leptospirosis, Bordetella, Lyme disease
Every 1 — 2 years	DHPP	Influenza, Coronavirus, Leptospirosis, Bordetella, Lyme disease per lifestyle
Every 1 — 3 years	Rabies (as required by law)	None

NOTE: Your puppy's vaccine schedule will be personalized to meet his/her specific needs. Your veterinarian may suggest staggering vaccines in smaller breeds.

DIET PLAN

Diet plan.html

File | C:/Users/91844/Downloads/dsw%20project_final/dsw%20project/dsw%20project/Diet%20plan.html

A healthy and well-balanced canine diet is important. A good diet will prolong your dog's life, and improve his or her quality while keeping them healthy and strong. But dogs of different ages have different nutritional requirements. So, how much or how little should you be feeding your four-legged friend? Read on to learn what your pet's body needs at the various stages of life.

Diet Plan

Age	What to feed?	How much?
0-45 days	Mother's milk or milk replacer like lactol or royal canin babydog milk.	4-5 times a day, 30-60ml milk in each meal via feeding bottle
45 days-3 months	Starter dry food like royal canin mini starter, farmina puppy starter, acana small breed puppy, drools starter etc or home-made food like curd rice, boneless chicken rice etc.	3 times a day, Mix dry food with water and run in blender if puppy cant chew, feed 70-125g total in a day divided in meals
3 -12 months	Junior/puppy variant of any reputed brand like royal canin mini junior, farmina mini puppy etc or home-made food.	2-3 times a day. Give dry kibble, can be mixed with gravy food if puppy prefers Up to 175g a day in total.
12 months+	Adult dry food like royal canin pug adult, orijen small breed adult, farmina mini adult etc or home-made food like rice chicken, soya rice, curd rice, chicken veggie etc	Twice a day, 130-190g a day in total depending on weight.

DOS AND DON'TS

do's and don'ts.html

File | C:/Users/91844/Downloads/dsw%20project_final/dsw%20project/dsw%20project/do's%20and%20don'ts.html

Do's And Don'ts

Owning a dog brings a great deal of enjoyment but also carries many responsibilities. Here are some Do's and Don'ts that will help you learn the laws linked to dog ownership and will make you a responsible dog owner.

Do's	Don'ts
Do Feed your dog the right diet. Dog food is made to contain all the nutrients a dog needs.	Don't Feed alot of treats to your dog because you'll then need to give your dog less at mealtimes, which means they are missing out on essential daily nutrients that keep dogs healthy.
Expose your pet to wind, wet, heat, or sun. Keep your pet dry and cool.	Always provide your pet with access to water and shade.
Regularly check your pet's feet to make sure they're free of wounds or infections.	Don't give chocolate to your dogs as it is toxic for them and can make them very ill.
Give your pet a safe, secure, and enclosed area that they can't jump or dig out of.	Leave your pet by themselves. Let them out of your sight. Predators such as dogs, birds, and raccoons can harm them.
Dry your dog before grooming	Don't bathe your dog too often as bathing your dog more often can strip the natural oils from its coat and dry out its skin.
Do Invest in His Health	Don't Skip Regular Vet Visits
Make sure your dog always has plenty of fresh clean water available; if you are feeding your dog dry food make sure you give them extra water.	Don't stay around your dog while they are eating they like to eat in a quiet, peaceful place.
Be selective about the time of day that you are your pet are outside.	Take bugs lightly. Mosquitoes, flies, and ticks are particularly problematic.

7.CONCLUSIONS/RECOMMENDATIONS

Vaccines help prepare a dog's immune system to defend itself from any invasion of disease-causing organisms. Vaccines contain antigens, which mimic disease-causing organisms in a dog's immune system, but don't actually cause disease. The purpose of puppy vaccines and dog vaccines is to mildly stimulate the immune system by having it recognize the antigens present. This way, if a dog becomes exposed to the real disease, it's immune system will recognize it, and therefore be prepared to fight it off, or at the least reduce its effects.

9. APPENDICES

9.1 STEPS TO EXECUTE/RUN/IMPLEMENT THE PROJECT

STEP 1: Write the Html code for the layout of the website.

STEP 2: Create an external CSS file and link it in the head tag of the html document.

STEP 3: Create a JavaScript file and link its source into the body of the html document.

STEP 4: Open the html file(s) in any internet browser.

STEP 5: Navigate through different pages.

9.2 CODING
